

Big Red® CRX Welding Gloves

The Big Red® CRX is a premium professional welders glove with high dexterity and additional back of hand protection for high heat applications and a highly cut-resistant liner. The glove has been designed with Dynamax® 265 Cut 5/TDM F material offering full 360° Cut Protection with the highest dual-standard cut resistance performance. The 3D design with pre-curved fingers provides a highly ergonomic fit with high levels of comfort and dexterity. The premium grade leather offers a great balance between protection and durability without compromising dexterity, comfort and protection.

Features

- Premium Big Red® leather combined with soft, highly durable goatskin leather palm for extra sensitivity and touch
- The 3D design provides a highly ergonomic fit with high levels of comfort and dexterity
- Pre-curved fingers and super soft goatskin leather finger sidewalls for additional dexterity and comfort
- Sensitivity when TIG Welding
- Soft goatskin leather back of hand and cuff for heat resistance
- Leather reinforced back of hand and fingers
- Reinforced/padded wear patch on side of the palm
- 360° cut protection – The Dynamax 265 liner offers Cut 5 / TDM F highest dual-standard cut resistance performance
- Sewn in heat resistant aramid thread for extra durability

Materials

- A Grade Big Red Butt Leather
- Goatskin leather palm
- Dynamax 265 cut resistant liner
- Aramid thread stitching.

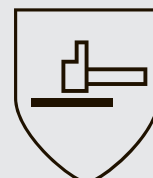

Certifications and Standards

Certified to today's standards

Why Elliott Australia certifies its welding gloves to EN 407:2020

Elliott Australia was the first company certified by Intertek SAI Global to EN 407:2020. Our welding gloves are **independently certified by an accredited third party**, not self-declared.

Our welding gloves are certified to:

- **EN 407:2020:** Protective gloves against thermal risks (heat and flame), current edition
- **EN 12477:2001+A1:2005:** Protective gloves for welders
- **AS/NZS 2161.2:2020:** General requirements (sizing, dexterity, innocuousness)
- **AS/NZS 2161.3:2020 and EN 388:2016:** Mechanical risks (abrasion, cut, tear, puncture)

Our EN 12477 welding glove classification uses results from **the current editions of EN 407 and EN 388**.

Why this matters for your workforce

Some welding gloves on the Australian market are rated, and a few certified, to AS/NZS 2161.4:1999 for heat and flame. That standard is **identical to EN 407:1994** and has never been updated. EN 407 has since been revised twice, in 2004 and 2020.

EN 407:2020 rates a glove on its **lowest single result** instead of an average, and it uses a tougher flame test. A glove also can't claim the top heat ratings until it has proven its flame resistance. The methods have changed, so a rating under the 1999 standard can't be compared directly with an EN 407:2020 rating.

Our gloves were already tested to EN 407:2020. We've now moved the certification to match, so **the standard on the cuff is the one the glove was tested to**.

Arc welding protection

Big Red® CRX meets **EN 12477's optional requirement for arc welding**.

No conductive parts, such as metal rivets, pass through the glove, and electrical resistance through the material is above 10^5 ohms, tested to EN 1149-2. No welding glove protects against electric shock from faulty equipment or live work, and resistance drops when a glove is wet, dirty or sweaty.

Independently certified means independently accountable

A third-party certificate isn't a marketing claim. Intertek SAI Global has reviewed the test reports, the materials, the manufacturing and the labelling, and confirmed the glove meets every applicable clause (licence SMK41830). When you specify an Elliotts welding glove, you can stand behind the rating, because someone independent already has.
